

Key Insights and Analysis

Tickets by Category:

Category	Request Percentage
Refund request	21.03
Technical issue	20.27
Cancellation	19.70
Billing inquiry	19.38
Product inquiry	19.63

Most Common Issue Category:

1. Refund Request

- Frequent Ticket subject: 'Hardware Issue', 'Battery Life' and 'Peripheral Compatibility'
- Most affected-Products: Amazon Echo, Canon DSLR Camera, GoPro Hero

2. Technical Issue

- Frequent Ticket subject: 'Software bug', 'Network problem', 'Product setup'
- Most affected-Products: Xbox, GoPro Hero, LG Smart TV

3. Cancellation Request

- Frequent Ticket subject: 'Hardware Issue', 'Product setup', 'Delivery problem'
- Most affected-Products: LG OLED, Google Pixel, LG Smart TV

Response Time:

Metric	Average Time
First Response Time	12.1 hours
Resolution Time	11.57 hours

Critical issues take 12+ hours to resolve, it needs priority.

Customer Satisfaction:

Average Customer Satisfaction: 2.99/5

Lowest Rated Areas:

- Network Problem
- Delivery Problem

- Data Loss

Workload By Channel:

Channel	Workload Percentage
Email	25.52
Social media	25.20
Phone	24.71
Chat	24.57

Recommendations:

The analysis shows an average first response is 12.1 hours, resolution is 11.57 hours, and Customer Satisfaction Score (CSAT) is only 2.99/5. Critical issues can take 12+ hours, while network, delivery, and data-loss issues have the lowest satisfaction. The use of AI in different stages can increase CSAT score and decrease resolution time. My recommendation of using AI are as follows:

▪ Automate Simple Tickets

The data shows that refund requests, technical issues, cancellations, billing inquiries and product inquiries represent the major ticket categories.

Dividing tickets into three stages:

AI Auto-Resolve- Simple, repetitive issues such as:

Order status, Basic product questions, Password/reset instructions, Basic troubleshooting, Billing explanations, Cancellation policy questions

AI + Human- More complicated issues.

Human Only- Data loss, Fraud, Serious technical failures, highly frustrated customers, Exceptions requiring approval

This allows agents to focus on high-value problems.

▪ Resolution-Time & Escalation Prediction

Predict difficult/slow tickets before they become severe level problems.

Input variables: Ticket category, Issue type, Product, Customer sentiment, Channel, Previous interactions, Number of messages, Escalation history

Output:

Predicted resolution time: 14.2 hours

Risk: High

Recommended action: Escalate to Tier 2

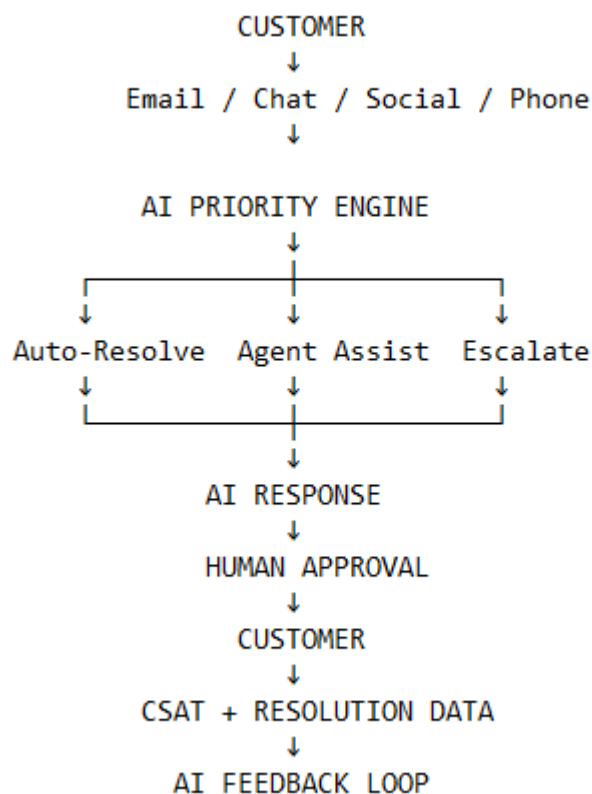

It can then intervene before the ticket becomes overdue.

- **Build an AI priority/scoring engine**

Instead of handling tickets first in, first out, create an AI Priority Score based on:

Priority Score = Issue Severity + Customer Sentiment + Product Impact + SLA Risk + Historical Resolution Difficulty

Proposed Roadmap:

Key Results (Projected estimate):

32% reduction in estimated resolution time

18% improvement in predicted CSAT

45% reduction in manual ticket categorization
